

# Energy Performance Certificate

10a Wickham Road  
Brockley  
LONDON  
SE4 1PB

Dwelling type: Ground-floor flat  
Date of assessment: 31 August 2011  
Date of certificate: 31 August 2011  
Reference number: 0447-2869-6587-9279-6861  
Type of assessment: RdSAP, existing dwelling  
Total floor area: 84 m<sup>2</sup>

This home's performance is rated in terms of the energy use per square metre of floor area, energy efficiency based on fuel costs and environmental impact based on carbon dioxide (CO<sub>2</sub>) emissions.

## Energy Efficiency Rating

|  | Current                 | Potential |
|--|-------------------------|-----------|
| <i>Very energy efficient - lower running costs</i> |                         |           |
| (92 plus) <b>A</b>                                 |                         |           |
| (81-91) <b>B</b>                                   |                         |           |
| (69-80) <b>C</b>                                   |                         |           |
| (55-68) <b>D</b>                                   | <b>63</b>               | <b>67</b> |
| (39-54) <b>E</b>                                   |                         |           |
| (21-38) <b>F</b>                                   |                         |           |
| (1-20) <b>G</b>                                    |                         |           |
| <i>Not energy efficient - higher running costs</i> |                         |           |
| <b>England &amp; Wales</b>                         | EU Directive 2002/91/EC |           |

The energy efficiency rating is a measure of the overall efficiency of a home. The higher the rating the more energy efficient the home is and the lower the fuel bills are likely to be.

## Environmental Impact (CO<sub>2</sub>) Rating

|   | Current                 | Potential |
|---|-------------------------|-----------|
| <i>Very environmentally friendly - lower CO<sub>2</sub> emissions</i> |                         |           |
| (92 plus) <b>A</b>  |                         |           |
| (81-91) <b>B</b>  |                         |           |
| (69-80) <b>C</b>  |                         |           |
| (55-68) <b>D</b>  | <b>61</b>               | <b>65</b> |
| (39-54) <b>E</b>  |                         |           |
| (21-38) <b>F</b>  |                         |           |
| (1-20) <b>G</b>   |                         |           |
| <i>Not environmentally friendly - higher CO<sub>2</sub> emissions</i> |                         |           |
| <b>England &amp; Wales</b>  | EU Directive 2002/91/EC |           |

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO<sub>2</sub>) emissions. The higher the rating the less impact it has on the environment.

## Estimated energy use, carbon dioxide (CO<sub>2</sub>) emissions and fuel costs of this home

|                          | Current                         | Potential                       |
|--------------------------|---------------------------------|---------------------------------|
| Energy use               | 231 kWh/m <sup>2</sup> per year | 210 kWh/m <sup>2</sup> per year |
| Carbon dioxide emissions | 3.7 tonnes per year             | 3.4 tonnes per year             |
| Lighting                 | £88 per year                    | £45 per year                    |
| Heating                  | £582 per year                   | £558 per year                   |
| Hot water                | £95 per year                    | £95 per year                    |

**You could save up to £67 per year**

The figures in the table above have been provided to enable prospective buyers and tenants to compare the fuel costs and carbon emissions of one home with another. To enable this comparison the figures have been calculated using standardised running conditions (heating periods, room temperatures, etc.) that are the same for all homes, consequently they are unlikely to match an occupier's actual fuel bills and carbon emissions in practice. The figures do not include the impacts of the fuels used for cooking or running appliances, such as TV, fridge etc.; nor do they reflect the costs associated with service, maintenance or safety inspections. Always check the certificate date because fuel prices can change over time and energy saving recommendations will evolve.

Remember to look for the Energy Saving Trust Recommended logo when buying energy-efficient products. It's a quick and easy way to identify the most energy-efficient products on the market.

This EPC and recommendations report may be given to the Energy Saving Trust to provide you with information on improving your dwelling's energy performance.

### About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by BRE Certification, to a scheme authorised by the Government. This certificate was produced using the RdSAP 2009 assessment methodology and has been produced under the Energy Performance of Buildings (Certificates and Inspections) (England and Wales) Regulations 2007 as amended. A copy of the certificate has been lodged on a national register.

|                                  |  |
|----------------------------------|--|
| Assessor's accreditation number: | BREC201020   |
| Assessor's name:                 | Kevin Bennett  |
| Company name/trading name:       | Maitlands Acorn Professional Ltd                         |
| Address:                         | 2nd Floor, 142-148, Main Road,<br>Sidcup, Kent, DA14 6NZ |
| Phone number:                    | 0208 300 1144  |
| Fax number:                      | 0208 308 0798  |
| E-mail address:                  | kbe@mapsurveyors.co.uk                                   |
| Related party disclosure:        | No related party   |

### If you have a complaint or wish to confirm that the certificate is genuine

Details of the assessor and the relevant accreditation scheme are as above. You can get contact details of the accreditation scheme from their website at [www.breassessor.co.uk](http://www.breassessor.co.uk) together with details of their procedures for confirming authenticity of a certificate and for making a complaint.

### About the building's performance ratings

The ratings on the certificate provide a measure of the building's overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used. The average Energy Efficiency Rating for a dwelling in England and Wales is band E (rating 50).

Not all buildings are used in the same way, so energy ratings use 'standard occupancy' assumptions which may be different from the specific way you use your home. Different methods of calculation are used for homes and for other buildings. Details can be found at [www.communities.gov.uk/epbd](http://www.communities.gov.uk/epbd).

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings on the certificate describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

### About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple everyday measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

Click [www.epcadviser.direct.gov.uk](http://www.epcadviser.direct.gov.uk) our online tool which uses information from this EPC to show you how to save money on your fuel bills.

Further information about Energy Performance Certificates can be found under Frequently Asked Questions at [www.epcregister.com](http://www.epcregister.com)

## Recommendations

The measures below are cost effective. The performance ratings after improvement listed below are cumulative, that is they assume the improvements have been installed in the order that they appear in the table. The indicative costs are representative for most properties but may not apply in a particular case.

| Lower cost measures                         | Indicative cost | Typical savings per year | Ratings after improvement |                      |
|---|-----------------|--------------------------|---------------------------|----------------------|
|   |                 |                          | Energy efficiency         | Environmental impact |
| 1 Low energy lighting for all fixed outlets | £50             | £37                      | D 65                      | D 63                 |
| 2 Upgrade heating controls                  | £350 - £450     | £30                      | D 67                      | D 65                 |
| Total                                       |                 | £67                      |                           |                      |

Potential energy efficiency rating D 67

Potential environmental impact (CO<sub>2</sub>) rating D 65

## Further measures to achieve even higher standards

The further measures listed below should be considered in addition to those already specified if aiming for the highest possible standards for this home. However you should check the conditions in any covenants, planning conditions, warranties or sale contracts. The indicative costs are representative for most properties but may not apply in a particular case.

|   |                  |      |      |      |
|---|------------------|------|------|------|
| 3 Replace single glazed windows with low-E double glazing | £2,500 - £6,500  | £47  | C 69 | D 68 |
| 4 50 mm internal or external wall insulation              | £5,500 - £14,500 | £127 | C 75 | C 76 |

Enhanced energy efficiency rating C 75

Enhanced environmental impact (CO<sub>2</sub>) rating C 76

Improvements to the energy efficiency and environmental impact ratings will usually be in step with each other. However, they can sometimes diverge because reduced energy costs are not always accompanied by a reduction in carbon dioxide (CO<sub>2</sub>) emissions.

### Summary of this home's energy performance related features

The table below gives an assessment of the key individual elements that have an impact on this home's energy and environmental performance. Each element is assessed by the national calculation methodology; 1 star means least efficient and 5 stars means most efficient. The assessment does not take into consideration the physical condition of any element. 'Assumed' means that the insulation could not be inspected and an assumption has been made in the methodology based on age and type of construction.

| Element               | Description                                    | Current performance |               |
|-----------------------|--|---------------------|---------------|
|                       |  | Energy Efficiency   | Environmental |
| Walls                 | Solid brick, as built, no insulation (assumed) | ★ ☆ ☆ ☆ ☆           | ★ ☆ ☆ ☆ ☆     |
| Roof                  | (another dwelling above)                       | -                   | -             |
| Floor                 | Suspended, no insulation (assumed)             | -                   | -             |
| Windows               | Single glazed                                  | ★ ☆ ☆ ☆ ☆           | ★ ☆ ☆ ☆ ☆     |
| Main heating          | Boiler and radiators, mains gas                | ★ ★ ★ ★ ☆           | ★ ★ ★ ★ ☆     |
| Main heating controls | Programmer, TRVs and bypass                    | ★ ★ ★ ☆ ☆           | ★ ★ ★ ☆ ☆     |
| Secondary heating     | None   | -                   | -             |
| Hot water             | From main system                               | ★ ★ ★ ★ ☆           | ★ ★ ★ ★ ☆     |
| Lighting              | Low energy lighting in 5% of fixed outlets     | ★ ☆ ☆ ☆ ☆           | ★ ☆ ☆ ☆ ☆     |

Current energy efficiency rating

D 63

Current environmental impact (CO<sub>2</sub>) rating

D 61

### Low and zero carbon energy sources

None

### Renewable Heat Incentive

You could receive 20 years of RHI payments and help reduce carbon emissions by replacing your existing heating system with one that generates renewable heat and, where appropriate, having your loft insulated to 150 mm and cavity walls filled. The energy required for space and water heating shown below would form the basis of the payments. The Department of Energy and Climate Change has up-to date information on technologies supported and the support levels at [www.decc.gov.uk/rhi](http://www.decc.gov.uk/rhi).

This dwelling: Loft insulation not applicable, Cavity walls not present

| Heat demand for RHI          | Existing dwelling | With loft insulation only | With cavity insulation only | With loft and cavity insulation |
|------------------------------|-------------------|---------------------------|-----------------------------|---------------------------------|
| Space heating (kWh per year) | 10537             | -                         | -                           | -                               |
| Water heating (kWh per year) | 2467              |                           |                             |                                 |

## About the cost effective measures to improve this home's performance ratings

If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approval from your landlord if the lease either requires it, or makes no express provision for such work.

### Lower cost measures

These measures are relatively inexpensive to install and are worth tackling first. The indicative costs of measures included earlier in this EPC include the costs of professional installation in most cases. Some of the cost effective measures below may be installed as DIY projects which will reduce the cost. DIY is not always straightforward, and sometimes there are health and safety risks, so take advice before carrying out DIY improvements.

#### 1 Low energy lighting

Low energy light bulbs last up to 12 times longer than ordinary ones and reduce lighting costs.

#### 2 Heating controls (room thermostat)

The heating system should have a room thermostat to enable the boiler to switch off when no heat is required. The thermostatic radiator valve should be removed from any radiator in the same room as the thermostat. Ask a heating engineer to do this work.

## About the further measures to achieve even higher standards

Further measures that could deliver even higher standards for this home. You should check the conditions in any covenants, planning conditions, warranties or sale contracts before undertaking any of these measures. If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approval from your landlord if the lease either requires it, or makes no express provision for such work.

#### 3 Double glazing

Replacing single-glazed windows with double glazing will improve comfort in the home by reducing draughts and cold spots near windows. Building Regulations apply to this work.

#### 4 Internal or external wall insulation

Solid wall insulation involves adding a layer of insulation to either the inside or the outside surface of the external walls, which reduces heat loss and lowers fuel bills. Further information can be obtained from the National Insulation Association ([www.nationalinsulationassociation.org.uk](http://www.nationalinsulationassociation.org.uk)).

## What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO<sub>2</sub> emissions.
- Check that your heating system thermostat is not set too high (in a home, 21°C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.
- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g. for mobile phones) turned on when you are not using them.
- Close your curtains at night to reduce heat escaping through the windows.
- If you're not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme.
- Check the draught-proofing of windows and replace it if appropriate.
- If you have unused open chimneys consider blocking them off (making provision for a ventilation opening and a cowl on top of the chimney to avoid dampness).

For advice on how to take action and to find out about offers available to help make your home more energy efficient, call 0800 512 012 or visit [www.energysavingtrust.org.uk](http://www.energysavingtrust.org.uk).
